

Legend:

- Circles are parameters decided by the user that will have important implications for the rest of the model (intermediate products generated with a set of parameters will not be usable with other parameters)
- Hexagons are notebooks
- Squares are outputs and inputs generated by the notebooks
- Triangles are raw files from ROCO

Pretrained Inception Model

Notebooks should be run in the following order (some orders could be changed probably):

- Text Preprocessing
- Inception Preprocessing (takes a long time)
- Extract Features (takes medium time)
- Untrained LSTM
- Create Model Triples
- Train LSTM Model
- Make Prediction
